

Exceptional weed control that's easy to use and flexible to fit your operation.

Sold exclusively through PhytoGen® cottonseed brand, Enlist® cotton lets you take control of weeds like never before with robust tolerance to 2,4-D choline, glyphosate and glufosinate. These multiple sites of action allow you to choose from the flexibility of Enlist One® herbicide or the convenience of Enlist Duo® herbicide. Now you can control weeds your way for improved weed resistance management that works with your cropping rotation.

One system stands alone - get the weed control that you deserve.

Tolerances

Enlist® cotton

2,4-D choline

Glyphosate

Glufosinate

Wide application window

Enlist® cotton

Up to first white bloom

No calendar cutoff dates

Enlist® cotton has no plant-back restriction after using an Enlist® herbicide for burndown.

Adding the Enlist® weed control system to your operation is simple.

- Enlist cotton is compatible with nearby crops, such as soybeans without the
 Enlist® trait, alfalfa, corn, peanuts, sorghum, rice and wheat. You can apply Enlist
 herbicides on Enlist cotton planted right next to these compatible crops without a
 buffer.
- Neighbor-friendly, near-zero volatility gives you peace of mind that Enlist herbicides will stay where they are sprayed.

"We had no drift issues whatsoever. We have a watermelon and cantaloupe farmer in the area, so we were very concerned about drift. With Enlist Duo, we had absolutely no drift."

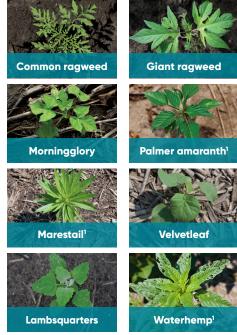

Jack Kent | Arkansas cotton farmer

"The tank mix of 2,4-D choline and Liberty herbicide really did exactly what we wanted it to.

Two weeks after application, we had excellent control. We were able to almost eliminate most weeds. It really took care of business."

Austin Warbington | Georgia cotton farmer

Apply with confidence to take down the toughest weeds, including:

¹ May require a broader management plan including timely application and use of a soil residual herbicide.

Complete convenience.

Only Enlist Duo® herbicide combines the proven performance of 2,4-D choline and glyphosate. The two sites of action work together to deliver control of yield-robbing weeds and help prevent resistance.

Application rate: 4.75 pt./A

Additional tank-mix flexibility.

Enlist One® herbicide provides additional tank-mix flexibility with glufosinate and other qualified tank-mix products, allowing for a customized weed control program to fit each farm. Farmers gain superior control of resistant and hard-to-control broadleaf weeds.

Application rate: 2 pt./A

On-target application.

90% less drift than traditional 2,4-D

The drift reduction from Colex-D® technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

96% less volatile than 2,4-D ester

Near-zero volatility — up to 96% less than 2,4-D ester — helps keep Enlist® herbicides in place and improve control.
